Business Analysis

- Data analytics
- Data science
- Data engineering

What is business analytics?

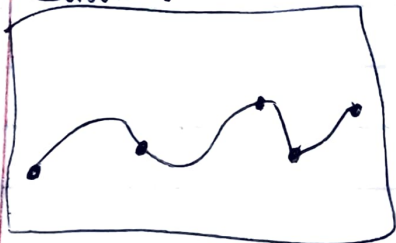

- ♥ Means transforming raw data into actionable insights
- ♥ Analyse business performance (but product performance)
- ♥ We want to drive business decisions using data to better plan for the future.
- ♥ Drives business growth (business profitability)
- ♥ Giving solutions to business problems.

① Understand the business model (Domain expertise) ② Understand the problem (DA)

Business model (understand how the business makes money)

Driven by data

Consumers

- what are customers saying?

Producers

Owners

- ♥ Investment
- ♥ Business model (static)

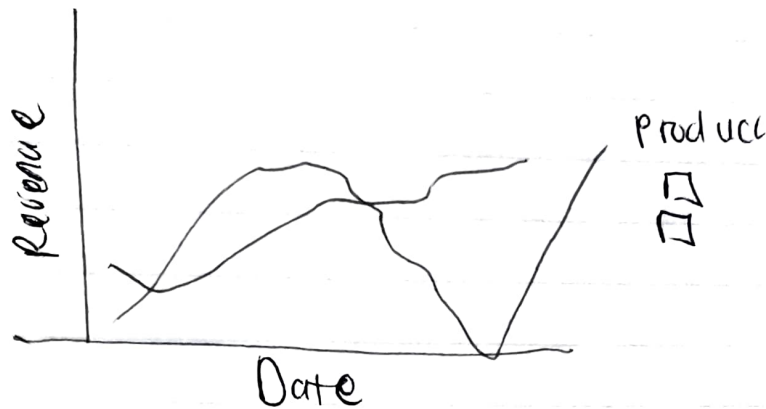

what is required to run a business?

③ How do we measure success KPI

Launch new product → Bring more customers - sell more - diversity - increase revenue - increase profit - remain competitive - market share - brand visibility - solve a problem - customer loyalty - more investment - Reduce cost

Quantitative KPI

$$\text{Revenue} = \text{Price} \times \text{Quantity}$$

Total cost = Variable cost + Fixed cost } The goal of business is to reduce cost

$$\text{Total cost} = \text{variable cost} + \text{Fixed cost}$$

Linked to the products we sell in the business

- NO. of transactions: 5
- NO. of units sold: 1000
- NO. of customers: 10
- Profit = Revenue - cost

Campaign

- Awareness / visibility / introduce new product
- Attract customers
- Customer acquisition / reduce stock holding
- Stimulate our customers
- To act in the direction of purchasing your product

Business analytics in terms of what kind of campaign should we do.

Business Analytics should also inform how we measure the success of the campaign. (Post campaign analysis / simple monitoring / reports)

KPI	Target		Control	
	Pre	Post	Pre	Post
Revenue	10K	25K	5K	6K
Frequency				
ARPO	100	220	80	85

we tell you what to do

Business Analytics

we don't tell you what to do, we

Dormant / churn - Inactive

Defined by active days - Active
